

# Complex Decision Support, Risk Management Tool, Policy Framework with Customized Consultancy

Helision is an Overarching Technology from Business Intelligence to Decision & Risk Management

Based on mathematical decision making support, this intuitive user interface acts as an arch between Business Intelligence platforms and Decision and Risk Management processes.

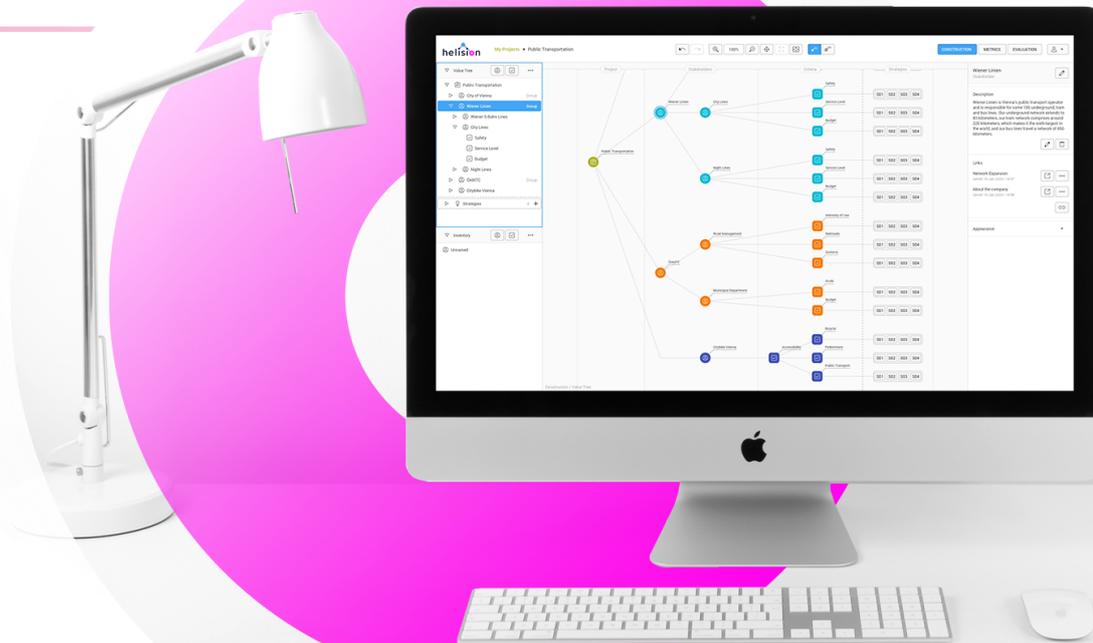

It's a complex software which guides you through complicated decision processes. Decision makers can state the problems simply with the precision the decision-makers feel they have evidence for.

Helision offers a combination of freely scalable components: consultation, web based software and bespoke software development for organizations with enclosed IT environment.

Capturing information

Problem modelling

PDMP methodology
